BioMedix Introduces PADnet+ HL7 (Health Level Seven)
***Time-saving, seamless transmission of patient demographics between
EMR systems and PADnet+***

TWIN CITIES, MN – May 5, 2009 – BioMedix unveiled its new proprietary PADnet+ with HL7 capabilities that enables physician practices to integrate PADnet+ into their Electronic Medical Records (EMR) platform. HL7 is the global information technology standard used in the majority of physician offices and hospitals worldwide for clinical and administrative data transfer. PADnet+, with HL7, allows primary care clinics, vascular labs or hospitals to electronically connect with EMR systems and seamlessly transmit patient information back and forth. Because HL7 takes the patient demographic data directly from the EMR system, hours of hand entry time are saved, and errors associated with redundant data entry are eliminated.

Will Rogers, BioMedix Vascular Solutions CTO, stated “The addition of HL7 import of patient information to the PADnet+ system will improve workflow and reduce data entry errors. PADnet+ will accept inbound HL7 ADT messages and send an outbound report message. PADnet+ will also accept text files and export PDF report files for practice management systems that don’t have HL7 capabilities. PADnet+ continues to add capabilities as the premium product for early diagnosis of peripheral vascular disease.”

HL7 provides standards for interoperability that improve care delivery, optimize workflow, reduce ambiguity and enhance knowledge transfer among all stakeholders; including healthcare providers, government agencies, the vendor community, Standards Developing Organizations and patients.

“With the aging of our population and current economic landscape, developing cost and clinical efficiencies in healthcare is more important than ever. EMRs and physician collaboration are key drivers to realizing these important efficiencies.” John Martin, MD, Vascular Surgeon – Anne Arundel Medical Center

BioMedix again streamlines the efficiencies needed in today’s Podiatric medical offices through its IT network and collaborative care model of connecting primary care providers and consulting specialists in the treatment of the PAD patient. PADnet+ with HL7 enhances the transfer of knowledge and care amongst the stake holders who strive to provide evidenced based medicine with fair financial return and trackable outcomes.

“BioMedix is committed to the ongoing development and delivery of integrated vascular solutions that enable physicians to improve patient quality of life through our community based PADnet products and services.” John Romans, CEO and President - BioMedix Vascular Solutions

About BioMedix

BioMedix Vascular Solutions, Inc. provides the only integrated suite of hardware, software and online services designed to cost-effectively detect Peripheral Arterial Disease (PAD) and Chronic Venous Insufficiency (CVI). Vascular specialists, primary care providers, hospitals and health systems use our products to identify these patients. Our devices and software reduce mistakes, provide data for sound analysis, build practice revenue and streamlines reimbursement while providing a platform that supports the continuum of care and increased quality outcomes. For more information, call (877) 854-0014 or log on to www.BioMedix.com.
